UNIVERSITY of MARYLAND
SCHOOL OF PHARMACY

Implementation: February 23, 2016
File Location: /SAMBA/PRC_Share/ISPORCode
Current Gate Keeper: Aida Kuzucan - akuzucan@umaryland.edu

ISPOR UMB student chapter's SAS Code repository

Welcome to the ISPOR UMB student chapter's SAS Code repository. We hope you find it helpful.

Disclaimer Notes in Folder:
- Due to space limitations, only SAS code and articles may be stored in this folder (no large datasets!).
- All code and information provided is to be used at your discretion. Our purpose is to collect and share information, but you must test the code yourself!

1. Anyone with an account on the PRC server will have access to your space.
2. It is for saving code and formats, but not for storing large data files.
   a. Please check to make sure your space is below 1GB.
3. You should be able to set the permissions of each subfolder you create so that you are giving users execute and read access to the files, but not write access. The files should be set to read only if you don't want anyone to be able to edit them. The person who creates the folder will need to set the permissions.
4. The files can be accessed by a SAMBA shortcut on your computer. I mentioned that sometimes students have SoP log ins that differ from the PRC account log in. These prevents them from being able to have a mapped SAMBA drive. If this is the case, they will need to access these files through steroid using an SSH client (e.g. putty) and/or a secure file transfer (e.g. WinSCP).
