 Disclosures: This resource was supported by Cooperative Agreement number 6NU17CE924961 from the Centers for Disease Control and Prevention (CDC). Its contents are solely the responsibility of the authors and do not necessarily represent the official views of CDC.

BACKGROUND

From January to June of 2021, there were 1,358 unintentional intoxication fatalities in Maryland, a 0.5% increase from the same period in 2020, and 89.6% of the fatalities were opioid-related. Indicating a continued need to support healthcare providers in reducing the risk of opioids and identifying and addressing misuse and opioid use disorder (OUD).

Since 2019, the Maryland Department of Health partnered with Local Health Departments to implement an opioid-specific Academic Detailing project. Local Health Department staff serve as detailers and visit primary care providers.

The project goals include improving opioid prescribing practices, increasing the use of the prescription drug monitoring program (PDMP), preventing overdose deaths, and augmenting the skillset of the public health workforce.

From July 2019 through June 2022, detailers completed 231 visits with providers

PROVIDERS ARE RECEPTIVE TO DETAILING PROVIDED BY LOCAL HEALTH DEPARTMENT STAFF.

THE APPROACH OF A STATEWIDE DETAILING PROJECT LEVERAGING OTHER LOCAL-LEVEL OPIOID- RELATED INITIATIVES IS A MODEL STATES MAY CONSIDER.

METHODOLOGY

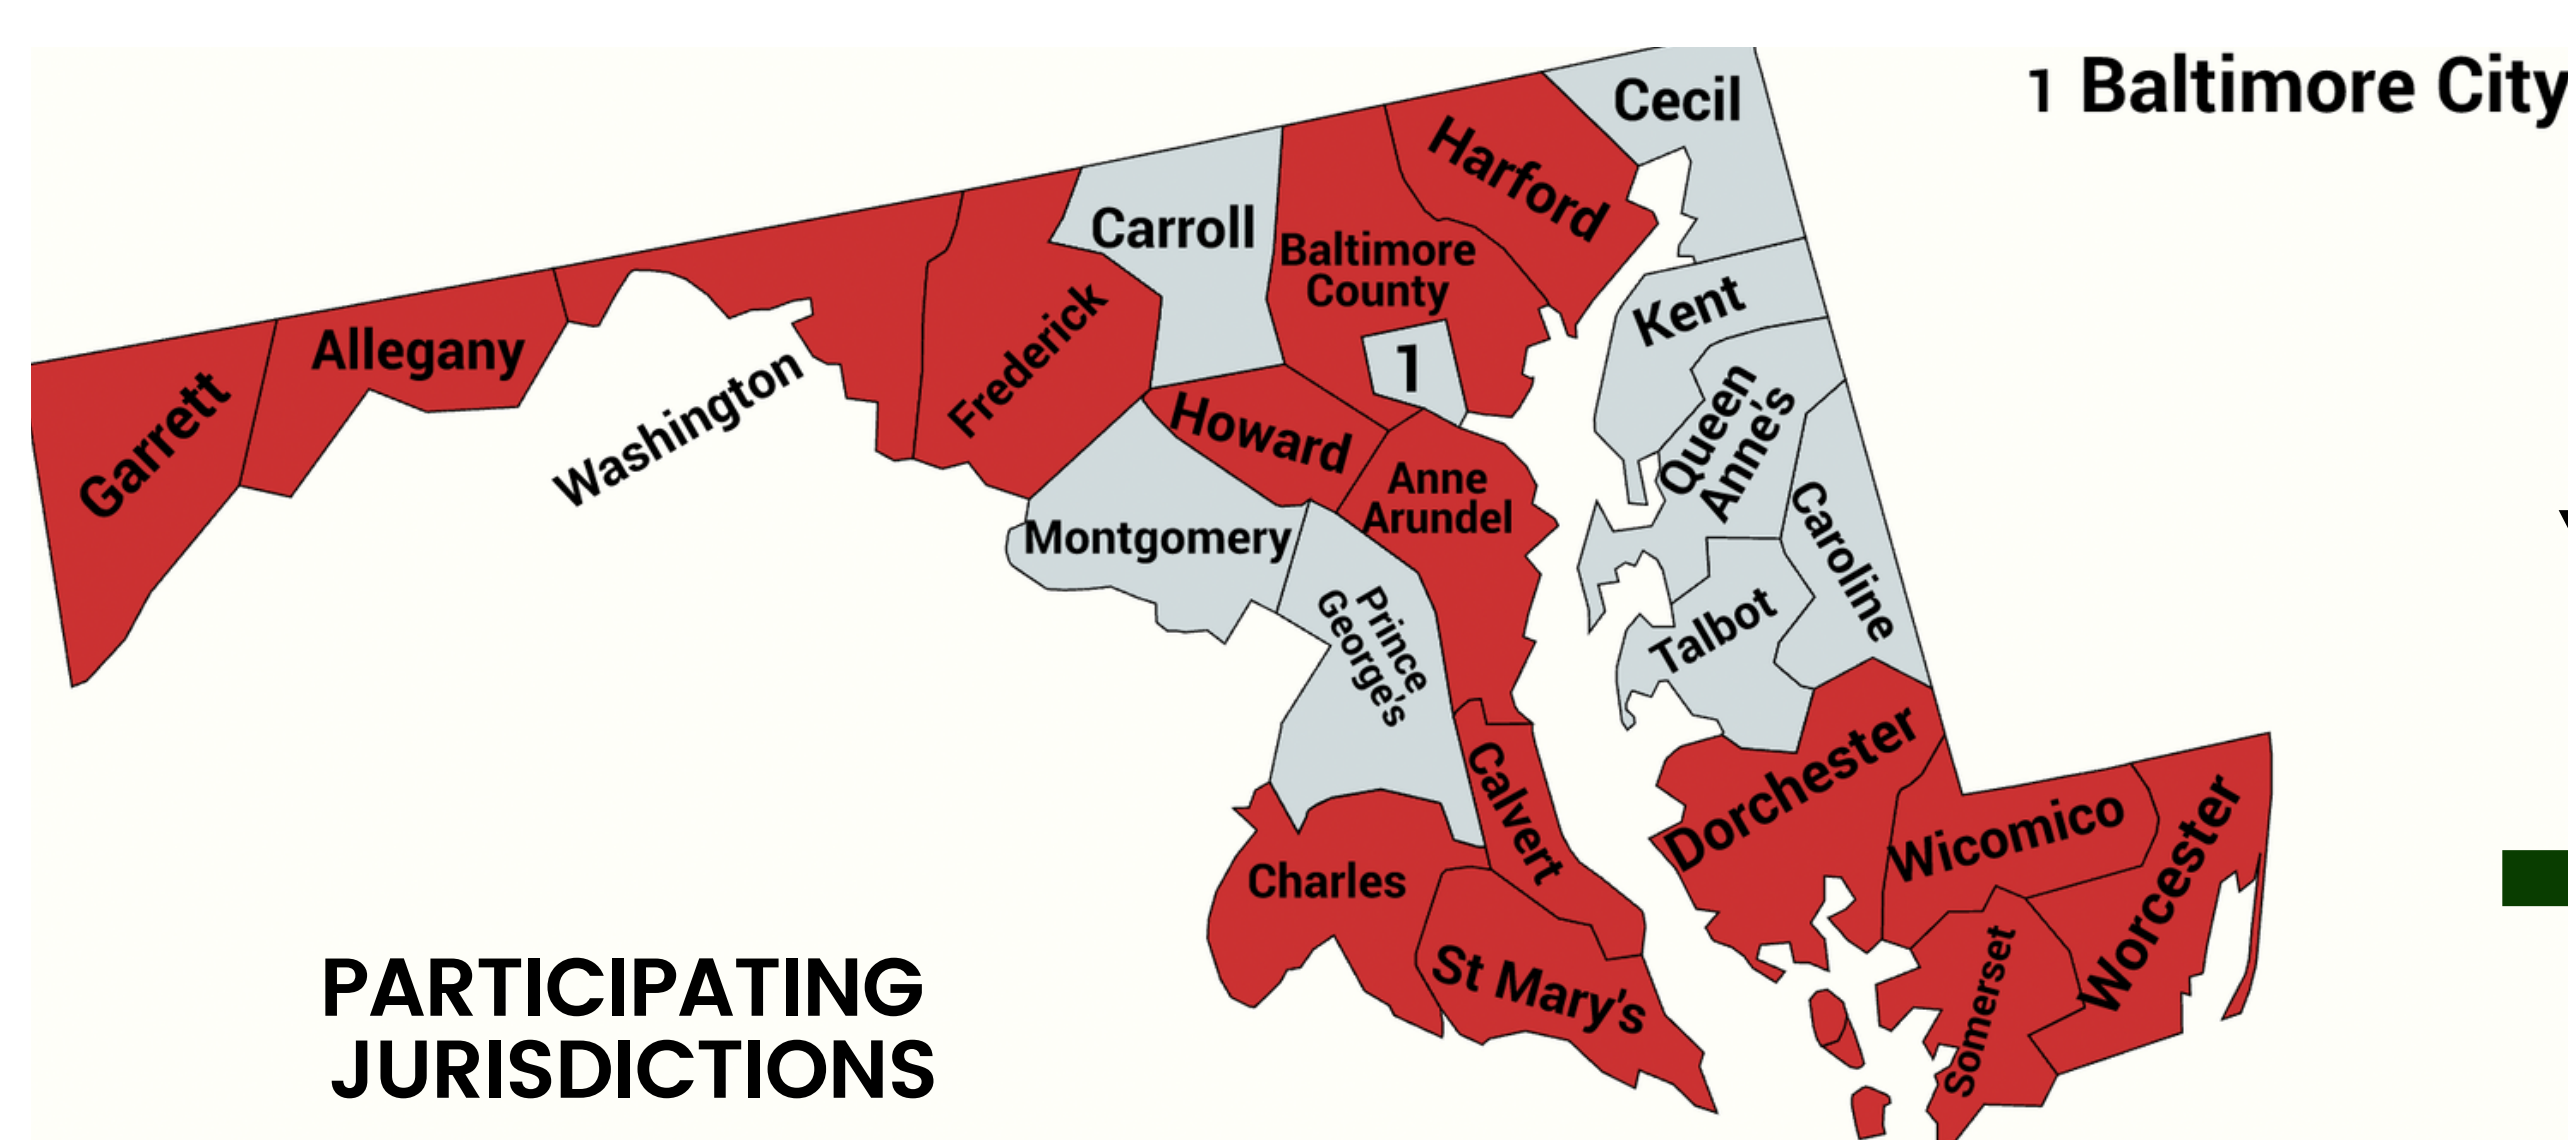

Descriptive Analysis of the Detailing Session Report forms to assess the dose and reach of the Academic Detailing project during the first three years of the project (July 2019- June 2022).

CONCLUSION

AD is an evidence-based intervention, during which trained detailers offer brief visits with practitioners to discuss their prescribing needs and connect them to relevant, actionable resources.

MD Local Health Department has the existing infrastructure to connect resources to providers but needed support in implementing an evidence-based education program. Detailers do not need clinical expertise; successful detailers can build and maintain relationships with providers.
